## Western Green Introduces Falcon Anchors™ and Falcon Pins™ Anchoring Products

Evansville, Indiana – July 29, 2021

We are excited to announce the addition of a new line of anchoring products to the Western Green family of brands. The Falcon Anchors and Falcon Pins product line of anchoring solutions will join and enhance our current brands of erosion and sediment control products by offering unique features and benefits to enhance the performance of soil stabilizing anchors.

Western Green is proud to offer the Falcon Anchor line, providing securing hardware for Turf Reinforcement Mats (TRMS), High-Performance TRMS (HPTRMs), and more. The Falcon Anchors and Pins can be used to create permanent erosion control systems designed to firmly secure and support soils deep into the soil strata. The Falcon Anchors and Pins are an innovative method to reduce erosion, increase soil stability, aid in vegetation establishment, while saving time and labor costs.

The Falcon Anchors are percussion driven anchors designed to provide immediate stabilization, require no crimping and have improved load-locking capabilities for easy installation. The Falcon Hex Pins are an innovative fastener providing significantly greater pullout resistance than typical straight pins or staples. The Falcon Hex Pins are available in configurations specialized for different soil types including soft and compact soils.

Starting immediately, the Falcon Anchors and Pins will be available through our extensive Western Green distributor network and are compatible with all our erosion control blanket brands. Upon the acquisition of North American Green and East Coast Erosion, Western Green now has the industry's leading TRM offering with NAG Vmax TRMS, East Coast flat net TRMs, and Western Green HPTRMS. The Falcon line will offer the end customer an unparalleled total package utilized through a vertically integrated supply chain. Learn more about the full product line offerings on our website, [www.westerngreen.com](http://www.westerngreen.com).
